By 1979, we knew all that we know now about the science of climate change - what was happening, why it was happening, and how to stop it. Over the next ten years, we had the very real opportunity to stop it. Obviously, we failed. Nathaniel Rich's groundbreaking account of that failure - and how tantalizingly close we came to signing binding treaties that would have saved us all before the fossil fuels industry and politicians committed to anti-scientific denialism - is already a journalistic blockbuster, a full issue of the New York Times Magazine that has earned favorable comparisons to Rachel Carson's *Silent Spring* and John Hersey's *Hiroshima*. Rich has become an instant, in-demand expert and speaker. A major movie deal is already in place. It is the story, perhaps, that can shift the conversation. In the book *Losing Earth*, Rich is able to provide more of the context for what did - and didn't - happen in the 1980s and, more important, is able to carry the story fully into the present day and wrestle with what those past failures mean for us in 2019. It is not just an agonizing revelation of historical missed opportunities, but a clear-eyed and eloquent assessment of how we got to now, and what we can and must do before it's truly too late.

History is filled with wars. We dream the victories and defeats, great and small, and note how they have shaped our world. Wars and social movements have made our civilization as we know it. Man's religion and past wars gives us an understanding of the present. In 1075, a militia loyal to the crown was used against the Norman rebellion. A militia in 1285, and later a Law of Trusts, reorganized the militia. In 1471, with the aid of the militia, towns in Sweden returned to reforms. The University of Uppsala was founded (1477) and printing was introduced. The civic humanist ideal of the militia was spread through Europe by the writings of Niccolò Machiavelli. The militiaman in times of crisis left his civilian duties and became a soldier. When the emergency was over, he returned to his civilian status. Militias continued in England, Italy, Germany, and the United States through the Middle Ages. The first US militia was in Boston. Militias soon followed in the Colonies. Militias were valuable in the American Revolution, the War of 1812, Mexican War, and both sides of the Civil War. There was further growth into the 1900's and on into the Present. "Thou art also victory and law When empty terrors overawe." (Wordsworth)

In this elegant new card deck, Eckhart Tolle distills the wisdom of his bestselling book *A New Earth* into short, carefully chosen passages for contemplation and inspiration. Each selection reinforces the principles of the book, leading us toward personal and, ultimately, global transformation. Tolle's sage guidance will help you transcend ego-based mind-sets to awaken to your life's purpose and achieve a genuine state of peace. These powerful quotations will free you from the confines of the ego and help you experience your true essence as well as the true essence of the world. This process is not only essential to personal happiness but also the key to ending conflict and suffering throughout the world. The box includes a prop-up frame that allows you to display a favorite card or a rotation of cards for ongoing, deeper reflection. With each card, Tolle guides you to embrace stillness and remain fully present in each moment, awakening to a new consciousness.

The subject of earth pressure is one of the oldest and most extensive chapters in soil mechanics and foundation engineering and is one of the pillars of structural engineering. First the development of earth pressure theory is comprehensively described. The descriptions range from the first approaches to the determination of earth pressure through continuum mechanical earth pressure models to the integration of earth pressure research into the disciplinary structure of geotechnics. The main part of the book comprises a selection of current calculation basics. The aim is to provide a collection of working instructions for foundation and structural engineers in construction companies, consultants and in building supervision as well as students. In order to further theoretical understanding, the essential basics of the determination of earth pressure are first presented. Then the most important processes for active and passive earth pressure and at-rest earth pressure for practical application are dealt with, with spatial effects also being taken into account. The book sets out to provide brief information about rarely encountered questions with references to further literature. In recent years, the dependency of earth pressure on displacement has been paid ever more attention. This applies not just to the passive but also to the active case. Questions are repeatedly passed to the DIN committee "calculation processes". A selection of these is dealt with in the commentary to DIN 4085, which came out in September 2018. The history of earth pressure theory is supplemented by 40 selected short biographies of scientists and practical engineers, who have taken up the subject and further developed it over the years. The book also has two appendices with terms, formula symbols and indices as well as earth pressure tables.

Man's language certainly is one of the most important elements distinguishing him from the other creatures roaming the earth. According to Martin Heidegger, it is the "House of Being," man's home and what shapes his own nature. This metaphor is the starting point of the present work, which aims at telling the (hi)story of the relationship between man's language and his being, using the biblical narrative as a roadmap giving us a vision of the origin of language, of its evolution, and of its end. The biblical narrative here serves as a source for the creation of a "meta-narrative,"

that is, a new narrative that depicts the metaphysical world opened up by language: the (hi)story of man's relationship with the house of being. Based on the description offered by the Bible, this meta-narrative tells how the House of Being comes to be built. It describes how this house becomes a village composed of scattered houses following the confusion of tongues at Babel; how the introduction of literacy radically transforms their dwellers' relation to their own temporality, and how the learning of a foreign language, which comes as a consequence of the Babylonian captivity , offers man the opportunity to appropriate a foreign house and leads him to a homecoming that unveils the nature of his home. Following the Pentecost, the village formed by all the houses becomes a city, as men begin to translate the scriptures into every language, that is, as exchanges occur between all the houses. Finally, the end of language and its relation with man's destiny is examined, in relation to the last days. Rooted in the philosophy of Heidegger and the spirituality of Karfried graf von D ü rckheim, this work proposes a new vision of the nature of language and of its role in man's destiny, one that uses the Bible as a guide but that is nonetheless not bound by its horizon.
