The lab proved many important concepts relating to cellular respiration. From this lab I have concluded that organisms placed in a cold environment will show a lesser rate of cellular respiration than those in an average temperature environment. The lab showed that temperature and respiration rates are proportional to each other.

The overall process of cellular respiration can be summarized in the following equation: glucose oxygen carbon dioxide water C 6 H 12 O 6 + 6 O 2 6 CO 2 + 6 H 2 O energy 36 ADP + 36 P i 36 ATP In eukaryotic cells, cellular respiration begins with glycolysis in the cytoplasm and continues in

[LAB 6 Fermentation & Cellular Respiration](#)

There are three ways cellular respiration could be measured. The consumption of O2 (how many moles of O2 are consumed in cellular respiration), Production of CO2 (how many moles of CO2 are produced in cellular respiration?) and the release of energy during cellular respiration. In this lab, the volume of O2 consumed by germinating and non-germinating peas at two different temperatures will be measured. PV=nRT is the inert gas law. P is the pressure of the gas.

Dry peas do not undergo cellular respiration because the cells aren't mobile. In germinated peas, the cells are actively working since they were consuming water during germination. In the second part of the experiment, the class measured yeast fermentation of different sugars.
