ISR ' s Contract Manufacturing eBook April 1, 2020; Industry Trends In Clinical Development Technology March 18, 2020; CRO Market Research March 6, 2020; Six Questions to Ask About Your Market Research March 3, 2020

Free Resources - Industry Standard Research

The CRO industry has been growing steadily in recent years. In 2018, the value of the global CRO services market was estimated to be valued at US\$37 billion¹. Between the forecast period of 2018 to 2024, the market is estimated to grow at a 8.2% CAGR as the demand for robust clinical services grows and sponsors continue to invest in R&D2.

CRO Sector - Results Healthcare

Within our “ Six Questions to Ask About Your Market Research ” white paper, ISR examines 6 questions you should ask in order to ensure you are getting the value you expect. ISR also explains why we think we should be the organization to provide you with that value.

White Papers - Industry Standard Research (ISR)

Clinical Market Research Reports. Industry Standard Research – ISR Reports – is a full-service clinical market research company operating exclusively in the pharmaceutical and pharmaceutical services industry and a sister company of Clinical Leader. Their syndicated and custom market research capabilities enable their customers to make smarter, more informed business decisions.

Clinical Market Research Reports - ISR Reports

ISR ' s Industry Reports are divided into 6 categories: CRO and service provider benchmarking ISR has an unmatched level of expertise in the clinical outsourcing and clinical development space. This expertise is best reflected in our contract research organization (CRO) and service provider benchmarking reports, which

ACT WITH CONFIDENCE.

Earlier this year ISR Reports released its annual CRO Market Size Projections report. Overall, 2018 was a decent, but not spectacular, year for CROs. All the major/public CROs saw year-over-year revenue growth. Still, the major publicly traded CROs took a pause, along with the rest of the market.

Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology.

The editors have engaged leading scientists in the field to participate in the development of this book, which is envisioned as a “one of a kind” contribution to the field. The book is a comprehensive text that puts fundamental bioanalytical science in context with current practice, its challenges and ongoing developments. It expands on existing texts on the subject by covering regulated bioanalysis of both small and large molecule therapeutics from both a scientific and regulatory viewpoint. The content will be useful to a wide spectrum of readers: from those new to bioanalysis; to those developing their experience in the laboratory, or working in one of the many critical supporting roles; to seasoned practitioners looking for a solid source of information on this exciting and important discipline.

Unleash your creativity with this awesome tattoo coloring book! This book is filled with badass designs to keep you focused and entertained for hours. Enjoy coloring a variety of tattoo designs that are great for men and women. Whether you're new to coloring or an advanced colorist, you'll love exploring our Tattoo Coloring Book. Why this book is for you: Over 45 designs
Single-sided pages to avoid bleed-through 8.5 x 11 inches format Great for all skill levels Premium glossy cover
Makes a great gift! Kws: tattoo books designs, tattoo design books, tattoo drawing books, tattoo flash coloring book, japanese tattoo book, tattoo book for men, tattoo designs for men, inspired coloring tattoos, mandala tattoo book, adult coloring book tattoo design, coloring books tattoos, adults tattoos, adult tattoo coloring book, tattoo drawing books for adults, the tattoo coloring book, tribal tattoo coloring book, coloring books for adults tattoo, adult coloring tattoo, tattoo coloring book, tattoo coloring books for adults, adult coloring books tattoo, tattoo coloring book, tattoo adult coloring books, ultimate tattoo coloring book, adult coloring book tattoo

This book is aimed at providing a large audience, including practitioners, politicians and decision-makers, with useful insights in relation to innovation and entrepreneurship in the biotechnology industry. It offers an international perspective and a set of

theoretical lenses to underline the roles and the effects of entrepreneurship and scientific innovation as key factors to support new firm emergence and to achieve and maintain competitiveness in this so important industry. Alain Fayolle, EM Lyon, CERAG Laboratory, France and Solvay Business School, Belgium The biotechnology industry across the globe is growing dramatically in line with rapidly emerging scientific and technological developments. This book explores both the theoretical and practical aspects of entrepreneurship in the biotechnology industry, focusing on the innovation processes underpinning success for new biotechnology firms (NBFs). It argues that biotechnology is at a crossroads: to date the science has been solid, yet commercial success remains elusive, and that it will be the commercial success of NBFs which will dictate the long term viability of this crucial industry. The authors go on to examine the roles played by both entrepreneurship and innovation in the competitiveness of biotechnology companies through a focus on: intellectual property strategies, product development, valuing biotechnology ventures, funding innovation and R&D, alliances and networking, changing industry structures evidenced through the shifting value chain and the impact of globalization on the changing industry and organizational life cycles. International case studies with a focus on human biosciences support the important theoretical developments at the heart of this book. Innovation and Entrepreneurship in Biotechnology offers original and valuable insights to researchers, academics and students as well as to practitioners involved with innovation and entrepreneurship in the field of biotechnology.

This book focuses on recent and future trends in analytical methods and provides an overview of analytical chemistry. As a comprehensive analytical chemistry book, it takes a broad view of the subject and integrates a wide variety of approaches. The book provides separation approaches and method validation, as well as recent developments and applications in analytical chemistry. It is written primarily for researchers in the fields of analytical chemistry, environmental chemistry, and applied chemistry. The aim of the book is to explain the subject, clarify important studies, and compare and develop new and groundbreaking applications. Written by leading experts in their respective areas, the book is highly recommended for professionals interested in analytical chemistry because it provides specific and comprehensive examples.

This book serves as a reference text for regulatory, industry and academic statisticians and also a handy manual for entry level Statisticians. Additionally it aims to stimulate academic interest in the field of Nonclinical Statistics and promote this as an important discipline in its own right. This text brings together for the first time in a single volume a comprehensive survey of methods important to the nonclinical science areas within the pharmaceutical and biotechnology industries. Specifically the Discovery and Translational sciences, the Safety/Toxicology sciences, and the Chemistry, Manufacturing and Controls sciences. Drug discovery and development is a long and costly process. Most decisions in the drug development process are made with incomplete information. The data is rife with uncertainties and hence risky by nature. This is therefore the purview of Statistics. As such, this book aims to introduce readers to important statistical thinking and its application in these nonclinical areas. The chapters provide as appropriate, a scientific background to the topic, relevant regulatory guidance, current statistical practice, and further research directions.
