Providing a comprehensive overview and analysis of the latest research in the growing field of public transport studies, this Handbook looks at the impact of urbanisation and the growth of mega-cities on public transport. Chapters examine the significant challenges facing the field that require new and original solutions, including congestion and environmental relief, and the social equity objectives that justify public transport in cities.

Why do people in Stockholm prefer to take the stairs over the escalator? Why do Londoners enjoy hanging out at bus stops? How do carmakers convince us to buy gas-guzzling, environmentally damaging, and wallet-draining machines? It's called the fun theory. What Darrin Nordahl illustrates in this delightful book is that transit can be just as inviting, exciting, and even seductive as the automobile, if designed with the passenger experience in mind. In Making Transit Fun!, Nordahl shows that with the help of architects, urban designers, graphic artists, industrial engineers, marketing experts-and even fashion designers-we can lure people out of their automobiles and toward healthier, more sustainable methods of transportation. This accessible E-ssential focuses on the possibilities for making public transit, cycling, and walking more appealing to the motorist. In each section, Nordahl demonstrates how the transit stigma can be overcome with innovative design. From the aesthetics of buses to segregated bike lanes and pedestrian-priority streets, Nordahl showcases examples from around the world that excite the heart and bring an easy smile.

This is a must-have reference for materials scientists and engineers in the automotive, aerospace, chemical, chemical process, and power generation industries. Fluoroelastomers are growing as products of choice for critical components such as O-rings, hoses and seals in hostile fluid and temperature conditions.

This book will inspire and spark grassroots action to address the inequitable impacts of climate change, by showing how this can be tackled and the many benefits of doing so. With contributions from climate activists and engaged young authors, this volume explores the many ways in which people are proactively working to advance climate justice. The book pays special attention to Canada and the Great Lakes watershed, showing how the effects of climate change span local, regional, and global scales through the impact of extreme weather events such as floods and droughts, with related economic and social effects that cross political jurisdictions. Examining examples of local-level activism that include organizing for climate-resilient and equitable communities, the dynamic leadership of Indigenous peoples (especially women) for water and land protection, and diaspora networking, Local Activism for Global Climate Justice also provides theoretical perspectives on how individual action relates to broader social and political processes. Showcasing a diverse range of inspirational and thought-provoking case studies, this book will be of great interest to students and scholars of climate justice, climate change policy, climate ethics, and global environmental governance, as well as teachers and climate activists.

The essays selected for this volume illustrate the growing interest in and importance of crime that is both environmental and transnational in nature. The topics covered range from pollution and waste to biodiversity and wildlife crimes, and from the violation of human rights associated with the exploitation of natural resources through to the criminogenic implications of climate change. The collection provides insight into the nature and dynamics of this type of crime and examines in detail who is harmed and what can be done about it. Differential victimisation and contemporary developments in environmental law enforcement are also considered. Collectively, these essays lay the foundations for a criminology that is forward looking, global in its purview, and that deals with the key environmental issues of the present age.

Business in Romania for Everyone: Practical Information and Contacts for Success

Volume 1 addresses how to apply a methodology for estimating the life expectancies of major types of highway system assets. The methodology is designed for use in lifecycle cost analyses that support management decision making. Volume 2 describes the technical issues and data needs associated with estimating asset life expectancies and the practices used in a number of fields--such as the energy and financial industries--to make such estimates.

TRB's National Cooperative Highway Research Program (NCHRP) Report 713: Estimating Life Expectancies of Highway Assets, Volume 2: Final Report describes the technical issues and data needs associated with estimating asset life expectancies and the practices used in a number of fields--such as the energy and financial industries--to make such estimates.
