For coastal zone surveys - accessing
inter-tidal zone, or difficult access
areas is easily achieved with airborne
surveying. LiDAR can provide data for
erosion, sediment transport & sea
defence studies.

~~LiDAR mapping and monitoring, fixed wing, helicopter or UAV~~

Lidar (/ ˈ l aɪ d ʒər /, also LIDAR, LiDAR, and LADAR) is a method for measuring distances by illuminating the target with laser light and measuring the reflection with a sensor.

Access Free Forestry Applications Of Airborne

Differences in laser return times and wavelengths can then be used to make digital 3-D representations of the target. It has terrestrial, airborne, and mobile applications.
