I Am a Strange Loop is a 2007 book by Douglas Hofstadter, examining in depth the concept of a strange loop to explain the sense of "I". The concept of a strange loop was originally developed in his 1979 book Gödel, Escher, Bach. In the end, we are self-perceiving, self-inventing, locked-in mirages that are little miracles of self-reference.

You will not go away understanding what Hofstader means by "A Strange Loop". Expecting science or philosophy, you will find autobiography. For those who are curious to find the very best of Hofstadter's ideas, stripped of the autobiography, I highly recommend "Surfaces and Essences". For the "fans", this is not a book you want to miss.

So a strange loop is not a necessary condition for consciousness. If you want to read a far more disciplined analysis of consciousness, I can strongly recommend the works of Hofstadter's friends, David Chalmers and (especially) Daniel Dennett. Or try Thomas Metzinger. Sorry Hofstadter, you must try harder.

When I saw a copy of "I Am a Strange Loop" in a used-book store, and Hofstadter said in the intro it was his update of "Godel, Escher, Bach," I figured this was my chance to rediscover the concepts in "Godel, Escher, Bach." Well, I did, but I can't say I was happy with the result.

"I Am a Strange Loop scales some lofty conceptual heights, but it remains very personal, and it's deeply colored by the facts of Hofstadter's later life. In 1993 Hofstadter's wife Carol died suddenly of a brain tumor at only 42, leaving him with two young children to care for . . . I Am a Strange Loop is a work of rigorous thinking." – Time "Almost thirty years after the ...

I Am A Strange Loop by Douglas Hofstadter Scott O'Reilly loops the loop with Douglas Hofstadter. "You would not find the boundaries of the soul no matter how many paths you traveled, so deep is its measure." Today, more than two thousand years after Heraclitus wrote those words, science has shrunk the boundaries of the soul considerably.

" I Am a Strange Loop is vintage Hofstadter: earnest, deep, overflowing with ideas, building its argument into the experience of reading it-for if our souls can incorporate those of others, then I Am a Strange Loop can transmit Hofstadter's into ours.

A strange loop is a cyclic structure that goes through several levels in a hierarchical system. It arises when, by moving only upwards or downwards through the system, one finds oneself back where one started. Strange loops may involve self-reference and paradox.

This book argues that the key to understanding selves and consciousness is a special kind of abstract feedback loop inhabiting our brains. Deep down, a human brain is a chaotic soup of particles, on a higher level it is a jungle of neurons, and on a yet higher level it is a network of abstractions that we call "symbols."

I Am A Strange Loop is well-known and loved by lots of geeky readers, but I can't really count myself as one of them, sadly. I wanted to like this book because of its many recommendations by fellow nerds, but it's hard-going. Hofstadter is fascinated, obsessed with the idea of self-referential paradoxes, or 'loopiness' as he calls it. Woe betide you if you find them even slightly less ...

There is much here and I do not doubt that writing "I am a Strange Loop" was a labor of love in more ways than one. It is, as with other somatic theories, even possible that oscillating fields in the brain have a lot to do with consciousness and personal identity. There are still reasons to believe that this is not the whole story.

Can thought arise out of matter? Can self, soul, consciousness, "I" arise out of mere matter? If it cannot, then how can you or I be here? I Am a Strange Loop argues that the key to understanding selves and consciousness is the "strange loop"—a special kind of abstract feedback loop inhabiting our brains. The most central and complex symbol in your brain is the one called "I." The "I" is the nexus in our brain, one of many symbols seeming to have free will and to have gained the paradoxical ability to push particles around, rather than the reverse. How can a mysterious abstraction be real-or is our "I" merely a convenient fiction? Does an "I" exert genuine power over the particles in our brain, or is it helplessly pushed around by the laws of physics? These are the mysteries tackled in I Am a Strange Loop, Douglas Hofstadter's first book-length journey into philosophy since Gödel, Escher, Bach. Compulsively readable and endlessly thought-provoking, this is a moving and profound inquiry into the nature of mind.

An original, endlessly thought-provoking, and controversial look at the nature of consciousness and identity argues that the key to understanding selves and consciousness is the "strange loop," a special kind of abstract feedback loop inhabiting our brains.

One of our greatest philosophers and scientists of the mind asks, where does the self come from -- and how our selves can exist in the minds of others. Can thought arise out of matter? 'What is a self and how can a self come out of inanimate matter?' This is the riddle that drove Douglas Hofstadter to write this extraordinary book. In order to impart his original and personal view on the core mystery of human existence – our intangible sensation of 'I'-ness – Hofstadter defines the playful yet seemingly paradoxical notion of 'strange loop', and explicates this idea using analogies from many disciplines.

Shows how analogy-making pervades human thought at all levels, influencing the choice of words and phrases in speech, providing guidance in unfamiliar situations, and giving rise to great acts of imagination.

Hofstadter's collection of quirky essays is unified by its primary concern: to examine the way people perceive and think.

Winner of the 2020 Pulitzer Prize for Drama "To watch this show is to enter, by some urgent, bawdy magic, an ecstatic and infinitely more colorful version of the famous surreal lithograph by M. C. Escher: the hand that lifts from the page, becoming almost real, then draws another hand, which returns the favor. Which came first? A Strange Loop is complex, teasing, thrilling." –Vinson Cunningham, New Yorker Usher is a Black, queer writer, working a day job he hates while writing his original musical: a piece about a Black, queer writer, working a day job he hates while writing his original musical. This blistering musical follows a young artist at war with a host of demons—not least of which are the punishing thoughts in his own head—in an attempt to understand his own strange loop.

Alone in a cube that's glowing in the darkness, X is content within its little universe of infinite thought. This solitude is disturbed by the appearance of Y, who insists on exposing X to the richness of the physical world. Each begins to long for what the other has, luring them into a strange loop. In this play for two variables, Marcus du Sautoy and Victoria Gould use mathematics and theatre to navigate the furthest reaches of our world. Through a series of surreal episodes, X and Y tackle some of life's greatest questions: where did the universe come from, does time have an end, do we have free will? I is a Strange Loop was first performed by the authors at the Barbican Pit, London, in March 2019. 'I is a Strange Loop is a play that plays... with ideas, concepts, abstractions and relationships that are, usually, hidden from the sight of ordinary mortals, articulating the ineffable, incarnating the incorporeal, revealing the inconceivable... it makes us feel we know a great deal more than we do... and is also very funny, utterly compelling and marvellously human.' Simon McBurney

Essays from some of the 20th century's greatest thinkers explore topics as diverse as artificial intelligence, evolution, science fiction, philosophy, reductionism, and consciousness, presenting a variety of conflicting visions of the self and the soul. Illustrations.
