Greg Woolf chronicles the history of the ancient Mediterranean city, against the background of wider patterns of human evolution, and of the unforgiving environment in which they were built. Richly illustrated, the book vividly brings to life the abandoned remains of our ancient urban ancestors and serves as a stark reminder of the fragility of even the mightiest of cities.

Natural history is a domain of inquiry involving organisms, including animals, fungi, and plants, in their natural environment, leaning more towards observational than experimental methods of study. A person who studies natural history is called a naturalist or natural historian. Natural history encompasses scientific research but is not limited to it. It involves the systematic study of any category of natural objects or organisms. So while it dates from studies in the ancient Greco-Roman world

Natural history Life cycle General features. The life cycle of a fly consists of four stages: egg, larva, pupa, and adult. Since larval forms, always morphologically distinct from adults, also occupy different habitats, flies in effect live two distinct lives and thus are able to adapt successfully to environmental changes.

Crocodile - Crocodile - Natural history: The young crocodile emerges from the egg with a length of 20-30 cm (8-12 inches). At first it remains with its siblings concealed at the edge of its water habitat in order to avoid various predators. Principal among these are fishes and birds, but larger crocodiles also prey upon the young.

Natural history Reproduction. Many features of the penguin life cycle vary with body size and geographic distribution; the chronology of breeding may also vary within a species in relation to latitude. The majority of species breed only once each year. Certain species, such as the African penguin (*Spheniscus demersus*), probably other members of this genus, and the blue penguin, breed twice a year.
