**Mathematics For
Economists
Solutions Manual**

Thank you very much for downloading **mathematics for economists solutions manual**. As you may know, people have look numerous times for their favorite books like this mathematics for economists solutions manual, but end up in infectious downloads.

Rather than reading a good book with a cup of tea in the afternoon, instead they cope with some malicious virus inside their laptop.

Mathematics For

(Theorem 7.10.1), there exists a number s^* between 0 and 1 such that $f(s^*) = 0$.

This is the unique positive root because $f(s) > 0$ for all $s > 0$.

Since $x = 2y$, equations (i) and (ii) yield

$4(1 - 2y)y = 2(1 - 2y)y$, so $y = 3/5$.

(B) If $y = 1$, then $x = 0$ and $z = 0$,
so $y + z = 0$ and $y^2 + z^2 = a^2$,

with $y = z = a/2$. This gives

the two points $(x, y, z) = (0, \pm 1$

$2, \pm 2a, \pm 2a)$. If we

evaluate the objective

function $x^2 + y^2 + z^2$ at each of

the points we have found, we

find that the two
points $(x, y, z) = (0, \pm 1$
