ABSTRACT:

Helping patients achieve an optimal quality of life through patient-centered treatment planning should be the ultimate goal of all oral health care providers.

However, this issue extends beyond the realm of the individual clinician's

office. This text presents quality-of-life research from various fields, including psychology, public health, and general health care; discusses how a patient-centered approach can be applied to basic oral and craniofacial research, clinical

and addresses how
oral health-related

Also discussed is
how factors such as
race/ethnicity,
gender, and age can
affect oral health-
related quality-of-
life concerns and
treatment
strategies. Finally,

the book offers an outlook on the role that oral health-related quality of life will play in future research and dental education.
