A chilling, riveting account based on newly released Russian documentation that reveals Joseph Stalin's true motives—and the extent of his enduring commitment to expanding the Soviet empire—during the years in which he seemingly collaborated with Franklin D. Roosevelt, Winston Churchill, and the capitalist West. At the Big Three conferences of World War II, Joseph Stalin persuasively played the role of a great world leader, whose primary concerns lay in international strategy and power politics, and not communist ideology. Now, using recently uncovered documents, Robert Gellately conclusively shows that, in fact, the dictator was biding his time, determined to establish Communist regimes across Europe and beyond. His actions during those years—and the poorly calculated responses to them from the West—set in motion what would eventually become the Cold War. Exciting, deeply engaging, and shrewdly perceptive, Stalin's Curse is an unprecedented revelation of the sinister machinations of Stalin's Kremlin.

Water has dominated images of the South throughout history, from Hernando de Soto's 1541 crossing of the Mississippi to tragic scenes of flooding throughout the Gulf South after Hurricane Katrina. But these images tell only half the story: as urban, industrial, and population growth create unprecedented demands on water in the South, the problems of pollution and water shortages grow ever more urgent. In *Southern Waters: The Limits to Abundance*, Craig E. Colten addresses how the South -- in an environment fraught with uncertainty -- can navigate the twin risks of too much water and not enough. From the arrival of the first European settlers, the South's inhabitants have pursued a course of maximum exploitation and control of the area's plentiful waters, investing widely in wetland drainage and massive flood-control projects. Disputes over southern waterways go back nearly as far: obstruction of fish migration by mill dams prompted new policies to protect aquatic life as early as the colonial era. Colten argues that such conflicts, which have heightened dramatically since the explosive urbanization of the mid-twentieth century, will only become more frequent and intense, making the shift toward sustainable use a national imperative. In tracing the evolving uses and abuses of southern waters, Colten offers crucial insights into the complex historical geography of water throughout the region. A masterful analysis of the ways in which past generations harnessed and consumed water, *Southern Waters* also stands as a guide to adapting our water usage to cope with the looming shortage of this once-abundant resource.

The year 167 B.C.E. marked the beginning of a period of intense persecution for the people of Judea, as Seleucid emperor Antiochus IV Epiphanes attempted -- forcibly and brutally -- to eradicate traditional Jewish religious practices. In *Apocalypse against Empire* Anthea Portier-Young reconstructs the historical events and key players in this traumatic episode in Jewish history and provides a sophisticated treatment of resistance in early Judaism. Building on a solid contextual foundation, Portier-Young argues that the first Jewish apocalypses emerged as a literature of resistance to Hellenistic imperial rule. In particular, Portier-Young contends, the book of Daniel, the Apocalypse of Weeks, and the Book of Dreams were written to supply an oppressed people with a potent antidote to the destructive propaganda of the empire -- renewing their faith in the God of the covenant and answering state terror with radical visions of hope.

The prophet Daniel faced unbelievable pressures to compromise his faith, to live in a hostile culture, and to confront temptations and threats. Believers in Jesus Christ face many of the same trials. Join Beth Moore for an in-depth look at the life of Dan

New statistical methods and future directions of research in time series *A Course in Time Series Analysis* demonstrates how to build time series models for univariate and multivariate time series data. It brings together material previously available only in the professional literature and presents a unified view of the most advanced procedures available for time series model building. The authors begin with basic concepts in univariate time series, providing an up-to-date presentation of ARIMA models, including the Kalman filter, outlier analysis, automatic methods for building ARIMA models, and signal extraction. They then move on to advanced topics, focusing on heteroscedastic models, nonlinear time series models, Bayesian time series analysis, nonparametric time series analysis, and neural networks. Multivariate time series coverage includes presentations on vector ARMA models, cointegration, and multivariate linear systems. Special features include: Contributions from eleven of the world's leading figures in time series Shared balance between theory and application Exercise series sets Many real data examples Consistent style and clear, common notation in all contributions 60 helpful graphs and tables Requiring no previous knowledge of the subject, *A Course in Time Series Analysis* is an important reference and a highly useful resource for researchers and practitioners in statistics, economics, business, engineering, and environmental analysis. An Instructor's Manual presenting detailed solutions to all the problems in the book is available upon request from the Wiley editorial department.
