(editors) Polymer
colloids, more
commonly known as
latexes, are important in
the manufacture of
synthetic elastomers,

Where To Download

commodity polymers, surface coatings, adhesive and numerous specialty products. The significant growth of the commercial production of polymer latexes during the past decade has been due to a number of factors. First, water-based systems, especially paints and coatings, avoid many of the environmental

problems associated with the solvent-based systems. Second, polymer colloid products can be custom designed to meet a wide range of application requirements. Third, large scale emulsion polymerization proceeds smoothly and controllably with a wide range of monomers to produce stable polymer

molecular weight.

Polymer colloids are
also important in

functional scientific

studies. This importance

arises from the spherical

shape of the particles,

range of attainable

particle diameters and

the uniformity of their

size distribution, and the

possibility of controlling

particle surface.

Polymer colloids are useful as size standards in microscopy and in instrument calibration, and as carriers in antibody-enzyme diagnostic tests. As suspensions of uniform spherical particles, they are ideal experimental systems to test the series of colloidal phenomena as stability and
