How to Create a Healthy PlateHow to Make a Budget in Excel – Part 4 The 12 Item General Health

The 12-Item General Health Questionnaire (GHQ-12) (Goldberg & Williams, 1988) consists of 12 items, each one assessing the severity of a mental problem over the past few weeks using a 4-point Likert-type scale (from 0 to 3). The score was used to generate a total score ranging from 0 to 36.

The 12-Item General Health Questionnaire (GHQ-12) ...

Because of its brevity, the 12-item General Health Questionnaire (GHQ-12) has become one of the most popular and used measure for detecting psychological distress. Originally intended as a unidimensional measure, the majority of subsequent factor-analytic studies have failed to support GHQ-12 as a unitary construct and have instead proposed a plethora of multidimensional structures.

The Dimensionality of the 12-Item General Health ...

The purpose of this study was to analyze the internal consistency and the external and structure validity of the 12-Item General Health Questionnaire (GHQ-12) in the Spanish general population. A stratified sample of 1001 subjects, ages between 25 and 65 years, taken from the general Spanish populat ...

GHQ - General Health Questionnaire

The 12-item General Health Questionnaire (GHQ-12) is widely used as a unidimensional instrument, but factor analyses tended to suggest that it contains two or three factors. Not much is known about the usefulness of the GHQ-12 factors, if they exist, in revealing between-patient differences in clinical states and health-related quality of life.

Does the 12-item General Health Questionnaire contain ...

BACKGROUND: the 12-item General Health Questionnaire (GHQ) is useful in measuring psychiatric morbidity in older people. Previous studies of its factor structure were often based on samples of young persons and on exploratory factor analysis techniques. The results varied from suggesting one to three factors.

A confirmatory factor analysis of the 12-item General ...

The General Health Questionnaire-12 (GHQ-12) is one of the most unique and extensively used self-report instruments for evaluating psychological disorders and strains. However, the factor structure of GHQ-12 has not been fully explored.

The factor structure of the general health questionnaire ...

The GHQ-12 was prepared by removing the items endorsed by ' physically ill ' respondents from the GHQ-60. Items were then divided into those in which agreement indicated either health or illness. Within each group, items were selected which had the highest slopes in the original item analysis.

General Health Questionnaire (GHQ) - GL Assessment

The results of exploratory factor analysis showed that there are two factors underlying the General Health Questionnaire-12. Of nine factor models were tested by means of confirmatory factor analysis, only three factor model: the eight-item two-factor model, 12-item three-factor model and 10-item two-factor model, demonstrated good model fit across all model fit indices.

Factorial structure of the Chinese version of the 12-item ...

Developed as a screening tool to detect those likely to have or be at risk of developing psychiatric disorders, it is a measure of the common mental health problems/domains of depression, anxiety, somatic symptoms and social withdrawal. Available in a variety of versions using 12, 28, 30 or 60 items, the 28-item version is used most widely.

General Health Questionnaire | Occupational Medicine ...

The 12-item General Health Questionnaire (GHQ) was used to assess participants ' general mental health status over the past several weeks. The average intake of 46 foods over the past year was assessed by a validated food frequency questionnaire. We also evaluated lifestyle and medical factors using a self-administered questionnaire.

Associations between diet and mental health using the 12 ...

The findings contribute to understanding of the 12-item General Health Questionnaire by separating Self-esteem and Stress, two dimensions often treated as one factor, and by identifying a third dimension of Successful Coping which is proposed to reflect individuals' perceived efficacy in interacting with the environment.
