Meteorites are our only contact with materials from beyond the Earth-Moon system. Using well known petrologic techniques, this book reveals in vivid colour their extraordinary external and internal structures. Looking deeper still, right to the atomic level, they begin to tell us of the environment within the solar nebula that existed before the planets accreted. In recent years, meteorites have caught the imagination of scientist and collector alike. An army of people are now actively searching for them in the hot and cold deserts of Earth. This book is a valuable guide to assist the searchers in the field to recognize the many classes of meteorites. It is further a reference source for students, teachers and scientists who wish to probe deeper these amazing rocks from space.
