According to Klas and Schrefl (1995), the "overall goal of semantic data models is to capture more meaning of data by integrating relational concepts with more powerful abstraction concepts known from the Artificial Intelligence field. The idea is to provide high level modeling primitives as an integral part of a data model in order to facilitate the representation of real world situations".

expressed by adverbs in English. On the basis of corpus data the most frequent adverbs of certainty, including certainly, indeed, and no doubt, are examined from the point of view of their syntactic, semantic and pragmatic characteristics. The corpus used is the International Corpus of English - Great Britain, supplemented by data from other present-day English corpora, and questionnaires testing native speakers' intuitions on fine-grained similarities and differences between closely related adverbs. The methodology also includes the study of cross-linguistic equivalents as indicators of semantic-pragmatic relations between adverbs. Translation corpora yield correspondences in Swedish, Dutch, French and German. A detailed study of those correspondences adds useful information for setting up a semantic-pragmatic profile of each adverb, showing where their meanings overlap and where the boundaries are. The

concept of semantic maps is relied on for plotting these relations.

The book not only provides a thorough empirical study of English adverbs expressing certainty, it also contributes to a better theoretical understanding of the complexity of modal certainty, how it is related to speakers' goals and to other semantic areas. It is the first in-depth study of this kind, combining rich information on English as well as opening up perspectives for further empirical and theoretical research into modality.

In this book, the micro-modular approach known as Tiernet within Conceptual Semantics is introduced. Constructions make up an important part in the approach, but in this approach constructions

are considered to be exceptions, licensed links between micro-modules, one of the kinds of symbolic modules in the approach. Similar to construction grammar approaches, the micro-modular approach takes a solid interest in the ' periphery ' and thus also studies irregular linking principles like constructions. The book details particulars in the development of generative grammar and the relation of Conceptual Semantics to this development, and then introduces the micro-modular approach and shows its usefulness for the description of language generally by not only using examples from English, but also, and in particular, by applying the micro-modular approach of Conceptual Semantics to data from Finnish.

This book addresses intensification and modal necessity in Mandarin Chinese. Intensification is used in this book to describe

the speaker 's emphasis on a proposition, because, by emphasizing on a proposition, the speaker intensifies the degree of his/her confidence and affirmativeness toward the truth of a proposition, cf. the distinction between ' weaker ' and ' stronger ' . Modal necessity discussed in this book refers either to the speaker ' s certainty regarding the truth of an inference, judgment or stipulation, that is, epistemic necessity or to the speaker ' s certainty concerning the obligatoriness of a proposition, based on rules or regulations, i.e., deontic necessity. This book examines a series of lexical items in Mandarin Chinese that express either intensification or modal necessity, provides a unified semantics and also presents how these lexical items are semantically distinct. Intensification and Modal Necessity in Mandarin Chinese is aimed at instructors, researchers and post-graduate students of Chinese Linguistics.

Discourse markers and modal particles are fuzzy linguistic categories that are difficult to describe. The contributions in this volume go beyond this statement. They discuss the intersection between modal particles and discourse markers and examine whether or not it is possible to draw a line between these two types of linguistic expressions. On the basis of new synchronic and diachronic data, from speech and writing, from European and Asian languages or cross-linguistically, the authors answer the question whether discourse markers and modal particles are distinct categories, whether they form a cline, or whether modal particles are a subcategory of discourse markers. This common question shows up throughout all chapters, which makes the book to a coherent whole. By disentangling the complexity of categorizing

multifunctional expressions, this book also sheds new light on the processes of meaning extension. The traditional discourse and modal functions are complemented by interactional and textual ones. A must read for functional linguists.

Why do Modern English modal auxiliaries ought to, should, and must, meaning OBLIGATION, occur in the present tense, yet their forms are in the preterite? Why does to accompany ought? One of the solutions to these questions is to look at the history of the English language. This monograph deals with the history of ought to, should, and must, which are of different syntactic and semantic origins: ought to stems from a main verb of Old English *gan* 'to have' (POSSESSION) along with *to*; should derives from *sculan* 'must' with its 'deviation' to shall, and *me* originates in

' to be allowed to ' (PERMISSION). The work concentrates on the transition from Old English (700-1100) to Middle English (1100-1500), which is a crucial period in the history of the English language. Topics addressed include the linguistic review of modality, the philological reading of primary texts, and the occasional reference to the other Germanic languages.

This book is a cross-linguistic exploration of semantic and functional change in modal markers. With a focus on Japanese and to a lesser extent Chinese the book is a countercheck to hypotheses built on the Indo-European languages. It also contains numerous illustrations from other languages.

Norwegian Modals is a detailed description of the syntactic and semantic properties of modals in Norwegian. Modal verbs in Mainland Scandinavian languages have received much less attention than their English and German counterparts, hence this book seizes the opportunity to present a range of new data and generalizations relevant for the study of Scandinavian languages, but also for the study of modality in Germanic and other languages. The book critically evaluates a range of proposals from the modality literature, focusing on the Theta-properties and the scopal properties of Modals in Germanic languages, and concludes that none of these previous proposals are able to account for the syntax of modals in Norwegian. The Theta-properties of modals are shown to depend on the construction in which the modal occurs, hence

neither a raising analysis, a control analysis, nor a raising-versus-control analysis in fact suffices to exhaust these properties of Norwegian modals. The interplay of modals with tense and aspect is likewise thoroughly investigated, presenting a range of data revealing that existing universalist proposals are insufficient to account for even quite regular patterns. Instead, a new analysis is presented, building on a new compositional tense system which exploits aspectual features of predicates and selectional preferences of modal classes.

bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes, which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.
