the late Dr Lynn

revered but hard to
find textbook for the
advanced calculus
course for decades.
This book is based on
an honors course in
advanced calculus
that the authors gave
in the 1960's. The

Engineering Mathematics 1
foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can

Accordingly be used
(with omissions) as a
text for a year's
course in advanced
calculus, or as a text
for a three-semester
introduction to
analysis. The
prerequisites are a
good grounding in
the calculus of one
variable from a
mathematically
rigorous point of

view, together with
some acquaintance
with linear algebra.

The reader should be
familiar with limit and
continuity type
arguments and have a
certain amount of
mathematical
sophistication. As
possible introductory
texts, we mention
Differential and
Integral Calculus by R

Courant, Calculus by
T Apostol, Calculus by
M Spivak, and Pure
Mathematics by G

should also have
some experience with
partial derivatives. In
overall plan the book
divides roughly into a
first half which
develops the calculus
(principally the
differential calculus)

in the setting of
normed vector
spaces, and a second
half which deals with
the calculus of
differentiable
manifolds.
