These genes were typically expressed from strong constitutive promoters (those that are always turned on), such as from plant viruses (especially the cauliflower mosaic virus 35S promoter) (Fang et al. 1989). These genes did not require intricate, multiple connections with plant genes or plant proteins to function.

High and Dry is the third in a series of reports highlighting genetic engineering's limitations and the need to increase public investment in more effective—but often neglected—agricultural technologies. The first two reports in the series are Failure to Yield and No Sure Fix. Droughts can be devastating to farmers and to the people who depend on the food those farmers produce.
