Bacteria And Viruses Guided Study Workbook

The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces. Bacteria are intercellular organisms (i.e. they live in-between cells); whereas viruses are intracellular organisms (they infiltrate the host cell and live inside the cell).

Bacteria vs Virus - Difference and Comparison | Diffen

Guided Questions- Viruses and Bacteria Notes Fill these out while we go through the presentation and turn them in for a grade! 1. Are bacteria prokaryotic or eukaryotic? prokaryotic 2. What is the main difference between a prokaryote and a eukaryote? Eukaryotic cells

Bacteria and viruses differ in their structure and their response to medications. Bacteria are single-celled, living organisms. They have a cell wall and all the components necessary to survive and reproduce, although some may derive energy from other ... 7 1 answer key viruses guided reading

Answers To Bacteria And Viruses Study Guide

Viruses are packets of nucleic acid with either DNA or RNA. Outside a host cell, a virus is dormant and it is only after it enters a host cell and uses its metabolic machinery to produce copies of itself it is able to burst out of infected cells. Bacteria carry a single circular molecule of DNA that encodes the essential genes for reproduction.
