to accentuate verticality, with delineated columns rising from base to cornice. There was, however, some retention of, and regression to, earlier styles as well.

## *Skyscraper | building | Britannica*

The term skyscraper was first applied to buildings of steel-framed construction of at least 10 storeys in the late 19th century, a result of public amazement at the tall buildings being built in major American cities like Chicago, New York City, Philadelphia, Detroit, and St. Louis. The first steel-frame skyscraper was the Home Insurance Building (originally 10 storeys with a height of 42 m or ...

## *Skyscraper - Wikipedia*

The first skyscrapers—tall commercial buildings with iron or steel frameworks—came about in the late 19th and early 20th centuries. The first skyscraper is generally considered to be the Home Insurance Building in Chicago, though it was only 10 stories high. Later, taller and taller buildings were made possible through a series of architectural and engineering innovations, including the ...

the larger-than-life personalities who built them. Beginning with a brief biographical sketch of each architect, illustrator Didier Cornille imaginatively depicts the construction of eight of the world's most impressive skyscrapers.

*Who Built That? Skyscrapers: An Introduction to ...*

The Flatiron Building, designed by Daniel Hudson Burnham and standing 285 ft (87 m) high, was one of the tallest buildings in New York City upon its completion in 1902, made possible by its steel skeleton.

While it was never the world's tallest building, it was one of the first buildings designed with a steel framework, and to achieve this height with other construction methods of that time would have been very difficult.

*Skyscraper - Wikipedia*

The early skyscrapers were a range of tall commercial buildings built between 1884 and 1945, predominantly in the American cities of New York City and Chicago. Cities in the United States were traditionally made up of low-rise buildings, but significant economic growth after the Civil War and increasingly intensive use of urban land encouraged the development of taller buildings beginning in ...

The list of cities with most skyscrapers ranks cities around the world by their number of skyscrapers. A skyscraper is defined as a continuously habitable high-rise building that has over 40 floors and is taller than approximately 150 m (492 ft). Historically, the term first referred to buildings with 10 to 20 floors in the 1880s. The definition shifted with advancing construction technology ...
