- Use Process Explorer to display detailed process and system information
- Use Process Monitor to capture low-level system events, and quickly filter the output to narrow down root causes
- List, categorize, and manage software that starts when you start or sign in to your computer, or when you run Microsoft Office or Internet Explorer
- Verify digital signatures of files, of running programs, and of the modules loaded in those programs
- Use Autoruns, Process Explorer, Sigcheck, and Process Monitor features that can identify and clean malware infestations
- Inspect permissions on files, keys, services, shares, and other objects
- Use Sysmon to monitor security-relevant events across your network
- Generate memory dumps when a process meets specified criteria
- Execute processes
